

MIRROR FRAME WITH MOISTURE-PROOF PATTERNED SIDE-FRAMES FOR BATHROOM

ABSTRACT

5

A mirror frame with moisture-proof patterned side-frames for bathroom is introduced to protect patterns on the side-frames from being corroded by bathroom moisture so that the patterns can be better preserved. The side-frame of the mirror frame is designed as a hollow body having an airtight interior. A removal slender plate with patterns or painting is mounted into the airtight interior. By providing sealing-up to the airtight interior, the removal slender plate can then be isolated from the surrounding moisture and thus the patterns or painting on the removal slender plate can last permanently inside the transparent side-frame.
